**Theme: Sustaining Tuna, Sustaining Nation**

**Topic: How tuna revenue supports Education and Health.**

Tuna, also known as tuna fish, is a type of fish that lives in the ocean. When I was a child growing up in the village, I saw tuna as just food that people caught and ate. I did not know that tuna is also very important for a country's economy. Today, tuna is a valuable commercial resource that many governments depend on. This is why people say, "When tuna is sustained, our nations are sustained." Tuna revenue helps support important services like education and health in many countries.

First, tuna revenue supports education in countries that are involved in fishing. For example, in the Marshall Islands, the government depends a lot on money earned from tuna fishing. This money helps build and maintain school infrastructure such as classrooms and facilities. It also helps pay for school supplies like books and stationery. Most importantly, tuna revenue helps pay teachers' salaries, which allows schools to continue running smoothly.

In addition, tuna revenue provides scholarships for students. Many students are able to continue their education because the government uses tuna money to support them. These scholarships help students attend high school, college, or even study overseas. Without this support, many students might not have the chance to continue their education and achieve their goals.

Thirdly, tuna revenue also supports the health sector. The government uses this money to build hospitals and improve health infrastructure. It also helps to pay for medical workers such as doctors and nurses. Furthermore, tuna revenue is used to purchase important medical equipment and medicines. This ensures that people can receive proper treatment and stay healthy.

In conclusion, tuna is not just a fish for eating, but it is also a very important resource for many countries. The money earned from tuna helps support education by building schools, paying teachers, and providing scholarships. It also supports health by improving hospitals and providing medicine and equipment. Therefore, when tuna is sustained, our nations are sustained because it helps improve the lives of the people.
